

Companion Therapy Laser

*** Good Morning America's 2009 Pet Product of the Year! ***

What will the application of laser therapy do for my pet?

The Companion Therapy Laser is exciting new FDA-approved technology that is successful in speeding the wound healing process and reducing pain and inflammation caused by common pet ailments such as otitis, hip dysplasia and arthritis. The Companion Laser is designed

specifically for pets, but the same technology is also FDA-approved for use on humans.

This laser therapy provides a sterile, pain-free, surgery-free, drug-free treatment which is used to treat a variety of injuries, wounds, fractures, neurological conditions, numerous dermatological problems as well as pain (see list below). Whether your pet is rehabilitating from trauma or injury, healing from wounds, or simply aging, your companion will benefit from this revolutionary approach to veterinary medicine.

How does the laser therapy work?

To put it simply, the laser energizes the body's cells, which in turn boost DNA production and then increase the health of the cells.

What should I expect during Companion Laser Therapy treatment session from my pet?

As the laser is administered, your pet will relax and enjoy, much like you, experiencing a good massage (though the probe doesn't actually touch your pet's skin). The almost immediate relief of pain will allow your pet to be comfortable and often anxiety is relieved as well.
